

# Evaluating the Impact of Technology on Learning, Teaching, and Designing Curriculum: Emerging Trends (Premier Reference Source)

Although Web-based technologies have fundamentally changed human interaction and behavior in many ways, they have not yet had a considerable impact on theory and practice in education. Encouraging open communication about the opportunities, challenges, and potential issues introduced by new methods in Web-based teaching and training is key to helping teachers, students, practitioners, and policymakers understand how new technologies will impact modern education. Evaluating the Impact of Technology on Learning, Teaching, and Designing Curriculum: Emerging Trends provides a forum for researchers and practitioners to discuss the current and potential impact of online learning and training and to formulate methodologies for the creation of effective learning systems. This book investigates user experiences, design, evaluation, and management of Web-based training in the classroom and workplace, offering suggestions for researchers and decision-makers involved in the study of the important relationship between technology and learning.
