

## Globalizing Educational Accountabilities (Education in Global Context)

Globalizing Educational Accountabilities analyzes the influence that international and national testing and accountability regimes have on educational policy reform efforts in schooling systems around the world. Tracing the evolution of those regimes, with an emphasis on the OECDs PISA, it reveals the multiple effects of policy as numbers in countries with different types of government and different education systems. From the effect of Shanghai's PISA success on nations trying to compete economically to the perverse effects of linking funding to performance targets in Australia, the analysis links testing and accountability to new modes of network governance, new spatialities, and the significance of data infrastructures. This highly illustrative text offers scholars and policy makers a critical policy sociology framework for doing education policy analysis today.
